Oil Pump Problem Escrito por MichaelMorin - 04/04/2018 12:01	
Hi,	
locked up. Pulled pan and found pos#3 main but when I checked the oil pump it was ok. p sure it was locked in drive) when I turn engin where it started from. I know that in the older	gine. Oil light came on and during troubleshooting engine and pos#3 rod bearings trashed. Was able to save crank ulled drive shaft out of pump and held back in engine (made e the shaft moved only a little bit and then went back to engines the distributor turned the oil pump drive shaft but there a common problem of something I should be looking
Please help.	
I didn't find the right solution from the Interne	t.
