

Minecraft caused a "Blue Screen of Death."

Escrito por faelanstevie - 07/03/2018 12:59

Hi,

I was playing Minecraft when my computer suddenly froze and then went to the BSOD. If this had happened some other time, then obviously I wouldn't have thought so. But I sincerely doubt it was a coincidence. Now, of course, my computer no longer works. Anyone knows how to fix this?

Please help.

I didn't find the right solution from the Internet.
